RouteBridge Logistics: user guide

Plain-language steps for everyone who uses RouteBridge. Pick your part:

1. The owner (company)
2. A shop (merchant)
3. The rider
4. Dispatchers, finance and other staff
5. The platform administrator
6. When something goes wrong

---

1. The owner

You run the company. Only you can add or remove shops.

First day

1. Sign in. The **Overview** shows a getting-started card: add a shop, add zones, add riders.
2. **Settings** → **Zones & rate cards**: add the areas you deliver to and what each costs.
3. **Drivers**: add your riders. Give each rider their access link or QR code so they can open the rider app.
4. **Settings** → **Members & roles**: add your team (see below).
5. **Settings** → **Dispatching**: turn on automatic assignment if you want the nearest free rider chosen for you.

Adding a team member

1. Ask the person to open the site and **sign up**. Before the form, they choose what they will do (shop, dispatcher, operations manager, finance or admin).
2. After signing in they see a screen with their **ID**. They press **Copy a message to send** and send it to you on WhatsApp or SMS.
3. In **Settings** → **Members & roles** paste the ID, choose their role, and press **Add member**.

No ID, no access. Nobody can be added any other way.

Adding a shop

1. The shop owner signs up and sends you their **Shop sign-up ID**, the same way.
2. **Settings** → **Merchants**: type the shop's name, paste the ID, press **Add merchant**.
3. The shop signs in and **registers itself** (phone, address, bank account). Until it does, it cannot create orders.

4. You see its details in **Settings** → **Merchants** → **Shop details**, with its own **Shop ID** and a Copy button. Bank details are shown only to you, admins and finance.

Removing and restoring a shop

- **Remove** (in the shop's card): its login stops working and no new orders can be created. Past orders and statements stay. A shop with deliveries still on the way cannot be removed.
- **Restore** (under **Removed shops**): brings the shop back with its history and its login.

Every day

- **Overview**: what needs attention right now. The bell lists problems and riders waiting for a delivery code.
- **Dispatch board**: assign riders. When a rider reaches a customer and asks for a code, a card appears at the top (see "Delivery codes" below).
- **Reconciliation**: match cash collected to what was due, and answer shops' claims.
- Everything updates by itself. You never need to refresh.

Delivery codes (your fraud protection)

A delivery is only completed when the rider enters the code the customer gives them at the door, and the server confirms it. A photo alone is not enough. 1. The rider taps **Text the customer a delivery code**. 2. A card appears on your dashboard with the code and ready-made buttons: **WhatsApp**, **Text message**, **Call**, **Copy message**. 3. Send the code to the customer, then press **Mark as sent**. 4. The customer reads the code to the rider. The rider types it in. The order shows ✓ **Verified**.

Codes last 30 minutes. After 5 wrong tries a code locks and a new one must be requested. If a customer cannot give a code, the rider marks the delivery as failed, and you reschedule it.

---

2. A shop (merchant)

1. **Sign up** at the site. Choose "I run a shop" and, if you like, type your shop's name.
2. Send the owner the **Shop sign-up ID** shown after you sign in (press **Copy a message to send**).
3. When the owner has added you, sign in again. You land in **your shop's portal**.
4. **Finish registering your shop** on the Overview: phone, address riders collect from, and the bank account you are paid into (10 digits). You can edit this later.
5. Press **+ New order** for each parcel: customer name and phone, delivery address, amount to collect.
6. Watch it on **My orders**. The list updates by itself and shows a small alert whenever an order is given to a rider, accepted, on the way, at the door or delivered.
7. Open an order for its tracking link (send it to your customer) and to see ✓ **Verified** once the customer's code was checked.
8. **Statements** shows cash collected, delivery fees and what is left to pay you. **Problems** is where you report damaged or lost goods, refunds and disputes.

Your **Shop ID** is shown on your Overview with a Copy button. Quote it if you ever need to contact the company.

---

3. The rider

1. Open the link or scan the QR code the dispatcher gave you. Add it to your home screen for one-tap access. It works with a weak connection and sends everything once you are back online.
2. **Jobs** lists your orders. Tap one to open it.
3. The **Collect from** card shows the shop to collect from: name, who to ask for, address and a tap-to-call phone number.
4. Use **Navigate** (or Waze) to drive to the address. Mark each step as you go: accepted, on the way, arrived.
5. At the customer's door mark the job as **arrived**. Now **Call customer** works.
6. Press **Text the customer a delivery code**. Ask the customer for the code they received.
7. Enter the code in **Customer's 6-digit code (required)**, add the name of who received it and a photo if you can, collect cash if due, and press **Confirm delivered**.
8. If the customer cannot give a code or nobody is home, choose a reason and mark the delivery **failed**. Do not guess codes: after 5 wrong tries it locks.

---

4. Dispatchers, finance and other staff

Role	What you do
Dispatcher	Create orders, assign riders, pass delivery codes to customers
Operations manager	Everything a dispatcher does, plus problems, claims and the audit history
Finance	Reconciliation, statements, claims decisions, billing, shops' bank details
Admin	Members, zones, billing and dispatch settings

Sign up, send your ID to the owner (see "Adding a team member"), and use the console once added.

---

5. The platform administrator

You run RouteBridge itself, not a company's deliveries. - **Platform** lists the companies on RouteBridge. - You create a company and set its first owner by their user ID. After that the owner runs it. - Plans are set by platform staff through the API (there is no button for it in the console yet); see `PUT /platform/tenants/{id}/plan`. - Your admin ID is kept in the database and the `PLATFORM_ADMIN_SUBJECTS` setting.

---

6. When something goes wrong

What you see	What to do
"Your account is not linked to a workspace yet"	Send your ID (shown on that screen) to the company owner
A shop cannot create an order and is told to finish registering	Open the Overview and complete the registration form
A rider cannot finish a delivery	The customer's code is required. Ask them for it, or mark the delivery failed
A code is locked	Ask for a new code ("Text the customer a delivery code")
A shop does not appear when adding it	Check the ID was pasted exactly, with no spaces. The ID must be the shop's own sign-up ID
The site says you must wait before signing in	Too many sign-in tries: wait 15 minutes
The phone link does not open	The computer running RouteBridge may be off or asleep. Ask whoever runs it to start it (see the README, "Day to day on this computer")
